#### 2 Superbadges

Superbadge

**Process Automation Specialist**

Completed June 15, 2022

Showcase your mastery of business process automation without writing a line of code.

Superbadge

**Apex Specialist**

Completed June 13, 2022

Use integration and business logic to push your Apex coding skills to the limit.

### Process Automation Specialist:

In this super badge i have learnt about:

1. Automate lead ownership using assignment rules.
2. Enforcing the data integrity with formula fields and validation rules.
3. Creating an custom object in a master-detail relationship to a standard object in trailhead.
4. Define the opportunity sales process using stages, the record types, and the validation rules.
5. It helped to perform Automate business processes to send emails, create related records, and submit opportunities for approval.
6. Creating a flow to display dynamic information on a Lightning record page.
7. Create a process to evaluate and update records.

## Apex Specialist:

In this super badge i have learnt about the creating the apex class, apex object and triggers.

1. To Automate record creation using Apex triggers.
2. Synchronize Salesforce data with an external system using asynchronous REST callouts.
3. Scheduling synchronization using Apex code.
4. Allow the Test automation logic to confirm Apex trigger side effects.
5. The Test integration logic using callout mocks.
6. To Test scheduling the logic to confirm action gets queued.

**Codes i developed to complete my apex superbadge:**

### For MaintenanceRequestHelper.cls

```
public with sharing class MaintenanceRequestHelper {
    public static void updateWorkOrders(List<Case> updWorkOrders, Map<Id,Case>
nonUpdCaseMap) {
        Set<Id> validIds = new Set<Id>();
        For (Case c : updWorkOrders){
            if (nonUpdCaseMap.get(c.Id).Status != 'Closed' && c.Status == 'Closed'){
                if (c.Type == 'Repair' || c.Type == 'Routine Maintenance'){
                    validIds.add(c.Id);
                }
            }
        }
    }

    //When an existing maintenance request of type Repair or Routine Maintenance is
closed,
    //create a new maintenance request for a future routine checkup.
    if (!validIds.isEmpty()){
        Map<Id,Case> closedCases = new Map<Id,Case>([SELECT Id, Vehicle__c,
Equipment__c, Equipment__r.Maintenance_Cycle__c,
                (SELECT Id,Equipment__c,Quantity__c FROM
Equipment_Maintenance_Items__r)
                FROM Case WHERE Id IN :validIds]);
```

```

Map<Id,Decimal> maintenanceCycles = new Map<ID,Decimal>();

//calculate the maintenance request due dates by using the maintenance cycle
defined on the related equipment records.
AggregateResult[] results = [SELECT Maintenance_Request__c,
                              MIN(Equipment__r.Maintenance_Cycle__c)cycle
                              FROM Equipment_Maintenance_Item__c
